

PRUNING (MARCH-APRIL)

ERICA (HEATHER)

1 The heather plants have finished flowering.

2 The flower stems need to be cut down to below the dead flowers.

3 If you don't do this there will be a bald patch next year where the plant flowered before.

4 Pruning can be done carefully, stem by stem.

5 Take hold of the entire plant confidently.

6 The part above your hand can simply be chopped off.

7 The plants will grow again from here.

8 They will then flower profusely.
